Prepare both a summary paragraph and a general description of the resource and its various elements as it exists today.

This row of five two-story, two-bay wide early Italianate-style brick houses with shed roofs and simple wooden cornices were built c. 1872. Most of the houses retain their original brick facades, which were always painted; one has been covered with formstone.

The houses are two stories in height, 12' and 13' wide and occupy lots 52' deep. Each house is two rooms deep and there is no backbuilding. The houses are constructed in common bond and were originally painted. Each house has a single hooded chimney located at the rear corner of the house. The shed roofs are capped by a wooden cornice consisting of a crown molding supported by block modillions, set above a plain, deep frieze area.

The tall, narrow window openings have splayed brick lintels and wood sills; the doorway openings have segmentally arched brick lintels. None of the original 2/2 sash survive and all openings are filled with 1/1 replacement sash. Doorways have single-light transoms and show a variety of replacement door types. The houses sit on medium-height basements, lit by a double-light sash. Each house is reached by three or four wooden, concrete, or brick steps.

Builder/Architect

Prepare both a summary paragraph of significance and a general statement of history and support.

These houses are significant as representing a relatively plain type of small street house that was constructed to provide inexpensive housing for the working class residents of the area, most of whom were German or Irish at the time of construction. The houses were built according to a pattern that was quite common to the city's working class neighborhoods of the middle and late nineteenth century. Recognizing that workers held different levels of jobs (and pay), builders created a hierarchy of house sizes (and prices) in the new neighborhoods going up to serve the expanding factory districts ringing the harbor and north-east and southwest of the central city. Builders acquired anywhere from an eighth to a half of a city block and built 14' to 15'-wide two-story houses on the main streets, and smaller, 11' to 13'-wide two-story houses on the narrower streets bisecting the blocks. Typically, in this period, main street houses might sell \$1,000 - \$1,500; small street houses for \$600 - \$800. Occasionally, the builder retained ownership of his small street houses to provide income for himself as rental properties. In this way people of varying means could afford to live in the same block. If they couldn't afford the purchase price of the small street houses, then they *could* afford the \$8 or so a month it would cost to rent one, while they saved to be able to buy their own home later.

The houses are especially significant because of their proximity to the Baltimore & Ohio railroad yards, the nation's first railroad, and its related railroad-oriented industries, like car and rail shops. Housing of this type was built to provide inexpensive housing for the wide variety of both Irish and German immigrants who came to southwest Baltimore to work in railroad-related industries in the decades after the Civil War.
